

THE SLOPES AND

❶ The carbon-stiffened Titan TF-X by **Dynafit** has incredible walking and touring ability, yet is compatible with all alpine bindings.

❷ The **G3 Saint** is light in the uphill, playful in the powder, and it's strong enough to handle anything the sidecountry wants to throw at you.

❸ A position sensor in the **Ortovox 3+** automatically routes the transmission signal to the best positioned of its three antennas, sending a clear signal to rescuers.
